Which finish is best for you?

Chrome: is a plating process which deposits hard chrome over a copper, nickel surface. This process is very durable and allows product to be used in any dry storage application.

Epoxy: an ideal solution for high humidity, wet, or walk-in-cooler applications. The carbon steel is treated with a zinc iron phosphate and the powder coated epoxy is electrostatically applied, baked, and cured to a hard surface.

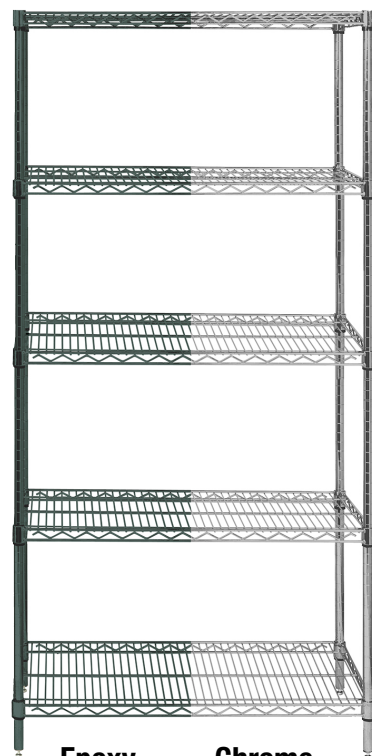

Ak-West Inc. Wire shelving has become a popular storage system to consumers and industrial users alike. With storage capacities of 600-1,000 LBS per shelf, wire shelving will help organize any area.

The open wire truss-reinforced shelves permit light to penetrate, allow free air circulation and give greater visibility of merchandise. Moisture and dust accumulation are reduced, and maximum effectiveness of sprinkler systems is ensured.

Assembly is simple and quick.

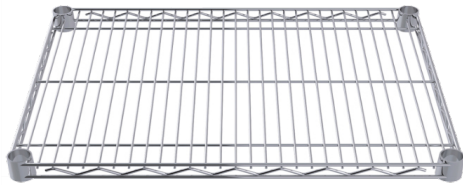

ASSEMBLING WIRE SHELVING IS AS EASY AS 1-2-3
