

ADVANTAGES OF

PLASTIC PALLET

VS.

WOOD PALLET

Suitable for food pharmaceutical, health industries

Industries

Suitable for general manufacturing facilities

Impermeable material, easy to clean

Hygiene

May contain bacteria, virus or parasites

Stable in any standard environment

Shape

Not ideal for environments with high humidity

Stackable and nestable options available

Space

Stack only options available

No splinters, chips or nails

Handling

It leaves residues, chips, splinters and dust

Cross boarder acceptance

Export

May require certified pallets to cross borders

Good visual impact at the point of sale

Impact

May have a deteriorated appearance

Can be produced from recycled plastics

Sustainability

Deforestation is required for production

Reusable with a high residual value

Recycling

Low re-usability, more susceptible to damage

Resistant with up to 10-year lifespan

Lifespan

Suffer harmful cracks and rapid degradation
